- GRG Manufacturing
- Gypsum board ceiling work
- Painting Contracting

MISSION

Our mission is to provide top-notch technical services and solutions that exceed client expectation. We aim to create long-term, partnerships with our clients based on trust, reliability and exceptional craftsmanship.

GRC

Glass Fiber
Reinforced Concrete

GRC is a material widely preferred by many engineer and architects servicing the construction industry. As a multipurpose construction material, which has been used for more than 30 years in many modern projects to create the esthetics needed, GRC is formed by reinforcing the concrete with Alkali Resistant glass fiber then molding it in to the desired form. With its high mechanical properties such as compression and elongation strength, GRC material can be used in many different designs.

Glass Fiber Reinforced Plastic is a composite material or fiber-reinforced plastic made of a plastic reinforced by fine fibers made of glass. Like carbon fiber reinforced plastic, the composite material is (Fiber Glass). The plastic is thermosetting, most often polyester or vinylester, but other plastics, particularly those of complex shape, are often not only of lower cost than their counterparts in conventional materials, but also easier- and hence cheaper - to finish and handle.
